

### Dear Provider:

We have revised the Medical Benefit Drug Matrix to introduce our new redirection site of care program for certain medications. Please use this matrix when requesting medical drugs for your patients. The drugs listed below are eligible for coverage under the medical benefit when clinically appropriate in the most cost-effective setting, and may also require pre-certification/prior-authorization, and may require additional cost-sharing for the member depending on their summary of benefits. This list of drugs does not guarantee coverage.

### Summary of change:

Effective January 1, 2023, some Hometown Health plans may require redirection of some drug codes for infusion or injectable therapy services to be rendered in the member's home by a contracted home health provider, at a freestanding infusion center, or at a Provider's office. A copy of this new policy for redirection to a specific site of care is available upon request. A member's failure to receive the service in an approved location could result in denial of claims. Please be advised that while the service has been approved as medically appropriate, the member's benefits may require this service be provided at specific locations. If needed, our Utilization Management Team can assist members with finding an appropriate site for care. Our team is available Monday-Friday, 8:00 am-5:00 pm, by calling (775) 982-3000.

### What you need to know:

- ♥ Pre-certification/prior-authorization requirements apply to all FDA-approved brand, generic, and biosimilar versions of the drugs listed on the Medical Benefit Drug Matrix. This includes any unlisted brand names, generic names, or biosimilar names, as well as new drugs that are approved by the FDA in that class during the benefit year.
- ♥ This list of drugs and the requirements for coverage are subject to change without notice.
- ♥ Please note that all new to market drugs will have an "unclassified drug" or "not otherwise classified" temporary drug code which includes but is not limited to J3490, J3590, J3591, J9999, J7199, Q9499 or C9399 and will require a pre-certification/prior authorization even if they do not appear on this list below.
- ♥ A list of excluded medications is at the end of the matrix. These are medications that are generally considered not covered. A provider may submit a case review for coverage if the provider feels that the member not receiving the excluded drug would seriously jeopardize the life or health of the member or the member's ability to regain maximum function. A submitted request does not guarantee coverage.

**If you have questions, please call our Customer Service Department at (775) 982-3000.**

The following list of drugs are categorized according to the most recognized therapeutic indication or treatment class. Some drugs can be used for indications other than those that are listed below. If a drug is marked "Y" for requiring pre-certification/prior authorization **ALL pertinent clinical documentation must be submitted** regardless of indication/condition being treated. All requirements must be met to be considered medically necessary for coverage under the Medical Benefit. Drugs that are not included in this list may be eligible for coverage under the Pharmacy Benefit which are drugs that are typically self-administered by the member (oral agents, topical agents, self-injectable agents). This list is subject to change without notice.
